

Live Vaccines Survey

Fields marked with * are mandatory.

Vaccines Audit - Live attenuated vaccines

Clinical audit on "Vaccination in Pediatric Transplantation" is almost complete. Only some aspects about live attenuated vaccines are needed. This append survey is about your center approach to this hot topic.

It would be great to have your responses back as soon as possible so that we can analyze the results and prepare the first document with them in March.

As always we here in La Paz University Hospital will be completely willing to collaborate in everything you need.

Thanks in advance for your collaboration, and looking forward to you.

* Type of Transplant are you involved:

- Renal
- BMT /HSCT
- Cardiac
- Lung
- Liver
- Pancreas
- Intestine
- Multi-organ/multivisceral
- Other

* Which is your specialty?

- Pediatric surgeon
- Pediatrician in charge of solid organ transplant recipients
- Pediatrician performing hematopoietic stem-cell transplantation
- Pediatric Infectious Disease specialist
- Others

* How many years have you been working in pediatric transplantation?

- < 5 years
- 5-10 years
- 10-15 years
- > 15 years

General practices

* Please, select live attenuated vaccines (LAV) used in your center after transplantation:

between 1 and 4 choices

- Measles-Mumps-Rubella (MMR)
- Varicella
- Rotavirus
- Yellow fever

* ¿Which criteria do you take into consideration for prescribing LAV?

- Time after transplantation
- No signs of rejection
- Minimal immunosuppressive treatment
- Lymphocyte count
- Other (specify)

¿Which year did your center begin to vaccinate with LAV?

* ¿Did your patients have any related adverse events after vaccination?

- Yes
- No

* ¿Did you evaluate seroconversion after vaccination?

- Yes
- No
